

**Ski-Doo 2007-09 800R Y-Pipe (high temp black coated)
134-128**

Installation Instruction

Remove stock y pipe; be sure to keep all stock springs.

Be sure the Straightline y-pipe has no manufacture defects. If the y-pipe has been run or used there are **no warranties** for fitment.

Always use lock tight when installing the new Straightline Y-pipe. Failure to do so can cause the Y-pipe to become loose and possible engine failure.

Jetting Requirements.

If just the y-pipe is installed. Use stock 480 main jets and raise needle .020 (not needed, yet recommended)
If the y-pipe is used in conjunction with the SPI billet or Sleeper Head. The installer must use a .020 shim.
Peak rpm – Peak hp increase 8000-8100

Clutching - Straightline recommends adding an Adjustable Pin kit to your snowmobile to help enhance the power. Kits are available from Straightline or your local Ski-doo shop.
