**-If over revving:**

-Add 1 or two washers to Center tip hole. If you are still over revving remove washers and add 1 tungsten washer to same hole.

**-Under Revving:**

-Remove washer from Center tip hole. If still under revving remove short bolt from Center tip hole.

Straightline Performance Single Pipe:

**Over revving:**

-Remove 3 washers on hole 3 and put a tungsten in.

**- If under revving:**

-Remove 1 washer at a time from Center tip hole until hitting 8000-8150 rpm.
