

Maptuner Nano Quick Start Guide

Get your vehicle tuned and connected quickly with Straightline Performance's Maptuner Nano and MyMaptuner App. Follow these simple steps to set up your device, register your account, and start tuning.

Step 1: Connect Your Maptuner Nano

Plug your Maptuner Nano into the ECU or diagnostics port of your vehicle. If you're unsure where the diagnostics port is located, check your vehicle's owner's manual or contact your local dealer. When the Maptuner Nano is plugged in correctly, the right LED will light up green. If it doesn't, try turning on the vehicle's ignition. If there's still no green light, contact your local dealer or visit our FAQ for troubleshooting.

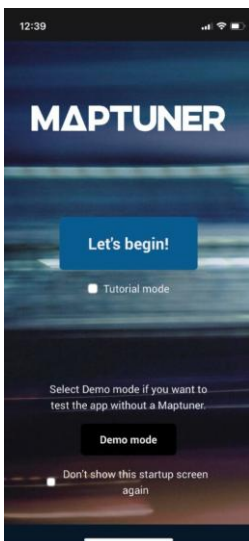

Step 2: Open the My Maptuner App

Open the MyMaptuner App on your smartphone. On the startup screen, you can choose between Tutorial Mode and Demo Mode:

- Tutorial Mode: Enables on-screen guides for first-time setup.
- Demo Mode: Lets you explore the app with simulated data.

Press ****Let's Begin!**** to start.

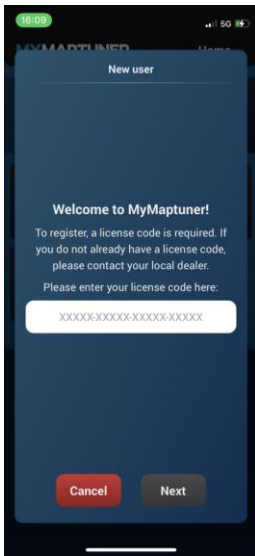

Step 3: Create or Log In to Your Account

You have three options:

1. Create an account with a license code
2. Create an account without a license code
3. Log in with an existing account

****Option 1: Create an account with a license code****

- Press ***New User***.
- Select ***Continue with license code***.
- Enter your license code (format: xxxxx-xxxxx-xxxxx-xxxx).

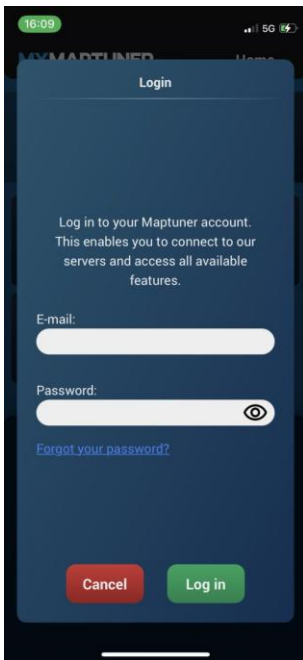

****Option 2: Create an account without a license code****

- Press ***New User***.
- Select ***I don't have a license code***.

****Option 3: Log in with your existing account****

- Press ***Log In*** and enter your credentials.

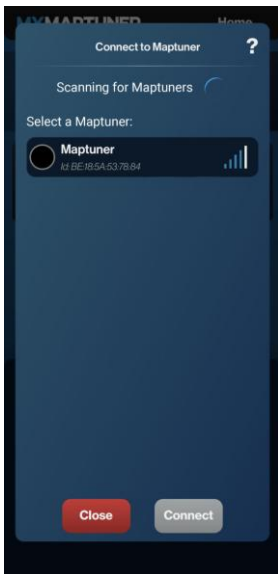

Step 4: Pair Your Maptuner Nano

Before connecting to the app, press and hold the button on the Maptuner Nano for 2–3 seconds until the top-left LED flashes blue rapidly. This means the device is in pairing mode for 30 seconds.

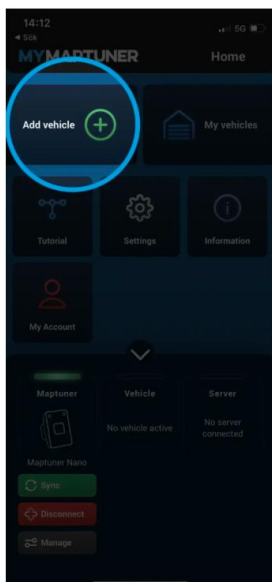

In the app's Control Center, press the Connect button and select your Maptuner from the list. If you can't find it, ensure it's in pairing mode and try again.

****Important:**** Only use the MyMaptuner App to connect via Bluetooth — not your phone's Bluetooth manager.

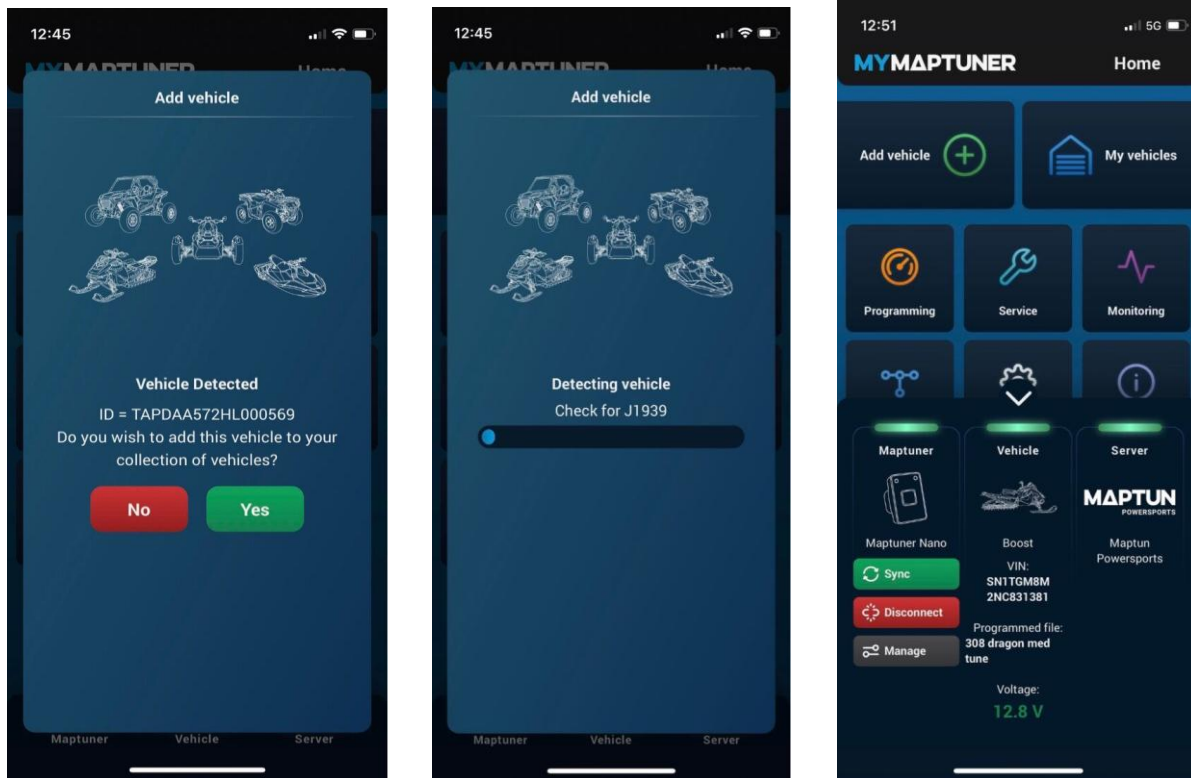

Step 5: Add Your Vehicle

Once the Maptuner Nano is connected (indicated by a slow flashing blue LED and a green bar in the Control Center), press ****Add Vehicle**** from the Home Screen.

The Maptuner Nano will automatically scan and detect your vehicle.

Press ****Yes**** when your vehicle appears on screen.

Wait for the process to complete. When done, you'll see your vehicle displayed in the Control Center, confirming successful setup.

Once your vehicle is added and you have Synced, Email perfcenter@straightlineperformance.com and we will get the Straightline tunes sent out to your device over the Network

Need Help?

If you encounter any issues during setup, contact Straightline Performance support or your local authorized dealer.
